

CSI INTRODUCES THE "ALL POWERFUL" MODEL FLEX III-A REPEATER CONTROLLER!

The FLEX III-A has the capability of a shared repeater tone panel as well as an LTR controller. The FLEX III-A is designed to support 51 CTCSS and 112 DCS subscribers as well as the standard 250 LTR subscriber codes. Some of the important features include front panel LCD display allowing the system operator to view user codes active on the system, programming via PC utilizing Windows-based software, remote programming over the air using a DTMF equipped radio, and low power consumption making it ideal for solar-powered sites.

FLEX III-A is supported via download-able software updates directly from the CSI web site using the Model FLEX-M interface module. All operating parameters are permanently stored in non-volatile EEPROM memory. FLEX III-A is designed with unmatched hardware simplicity that guarantees highly reliable continuous operation. Total compatibility when used in a wide area networking system utilizing FLEX IV-DSP controllers.

Special priority programming software feature allows homing existing LTR users to the original LTR channels

in the event of future channel expansion. This feature prevents recalling hundreds of users' radios for programming the additional channels.

FLEX III-A INCLUDES...

1. Removable connectors for easy installation.
2. Front panel LCD display allows the operator to observe exactly who is using the system.
3. Computer Programming compatible with Windows XP operating system. No more worry about DOS programs.
4. Remote Programming using a DTMF radio.
5. Free firmware updates via E-mail or by logging on to our web site. (The latter requires using CSI's low cost FLEX-M interface module).
6. Very low power consumption makes the system ideal for solar sites.
7. Unmatched hardware simplicity guarantees high reliability.
8. FLEX III-A is available at *less than half the cost* of some of our competitors.
