

SIMPLEX REPEATER WITH VOICE PROMPT

This version is a modification of the standard simplex repeater.

In the standard simplex repeater, when it is time to play back the message, the system first generates the two tones followed by the voice message.

In this version, when it is time to play back the message, the system first generated the two tones followed by a fixed voice message followed by the normal voice message.

Two different fixed voice prompts can be selected and each message is nine seconds long.
